[Clearing Your Cache]

Your web browser’s “cache” is a storage place on your computer’s hard drive where files and images from the Web reside so they don't have to be downloaded each time you return to a web page. This speeds up the display of pages you frequently visit or have already seen, because your web browser can open the page from your hard disk instead of from the Web.

However, this time saver may get bigger and slower over long periods of time and may include files and information that have been updated since your last visit to that web page. Deleting your cookies and cache resolves MANY Web page errors including problems with your login, pages loading incorrectly, etc. Always try the 'Refresh' button first.

Windows Operating System

Internet Explorer 5 and 6.x:

1. In Internet Explorer, on the **Tools** menu, click **Internet Options**

![Internet Options](image1.png)

2. Click the **General** tab.

3. In the area called **Temporary Internet Files**, click the **Delete Cookies** button. Click the **OK** button.
